Product Category: Inspection Systems
Product: CMDM6700 – SKF Microlog Inspector; CMVL8000 – Wireless
Machine Condition Detector (WMCD)
Version: All

Abstract

This knowledgebase article provides instructions on how to clear
historical SKF Wireless Machine Condition Detector (WMCD) list from an
SKF Microlog Inspector handheld device.

Overview

When there are no detectable SKF WMCD devices within range, then
the SKF Microlog Inspector will pull from a list of historical WMCD
devices. The "Historic WMCD Devices" list [Figure 1] is a list of all
WMCD devices that this device has connected to in the past.
Therefore, it is not an accurate list of available WMCD devices, as it is
only pulling from a historical list.

Figure 1. Historic WMCD Devices list

To clear the historical list of WMCD devices, browse the SKF Microlog
Inspector device. Go to Program Files\Microlog Inspector\ and
delete the BluetoothDevices.xml file, which houses this list.
