Abstract

Why am I not able to change the Inspection Prompt and/or Inspection Result once data has been collected?

Overview

Typically, you are not allowed to change the Inspection Prompt and/or Inspection Result once data has been collected, as modifying these for existing POINTs modifies any existing POINT data associated with the POINT. The Inspection POINT editing feature should <u>only</u> be used for Inspection Result and Prompt clarification or error corrections (typos), not to modify the meaning of the labels or the alarm results associated with each Inspection result.

Because of this, <u>only</u> users with Administrator access level within SKF @ptitude Analyst are allowed to make these changes as shown in Figure 1.

If you wish to edit the inspection POINT, click to enable the 'Allow edits anyway' check box. [Figure 2] Once enabled, the fields become active, allowing you to make necessary edits.
