Product Group: Alignment

Product: TKSA 60 Alignment Tool

Version: N/A

Abstract

There are no physical markings on the TKSA 60 Alignment Tool that would indicate whether the instrument is a SERV unit or a regular unit. This article provides a way of distinguishing between the two.

Overview

A TKSA 60 **SERV** unit has additional features activated in its software that a regular unit does not have.

The two options listed below will be active on a TKSA 60 **SERV** unit:

- Correct at any angle
 - User is not restricted to the clock position when making corrections.
- Train Size 3
 - The system is licensed to allow machine trains with up to three (3) machines.

To verify the licensed features on a unit, browse to the **About** screen from the Home menu. [Figure 1]
