1 Linked Resources

You can now more easily view the resources linked to your forms, form tools, assets, rounds, and tasks. On those GoPlant panels, the count of resources linked to a particular resource is now a hyperlink.

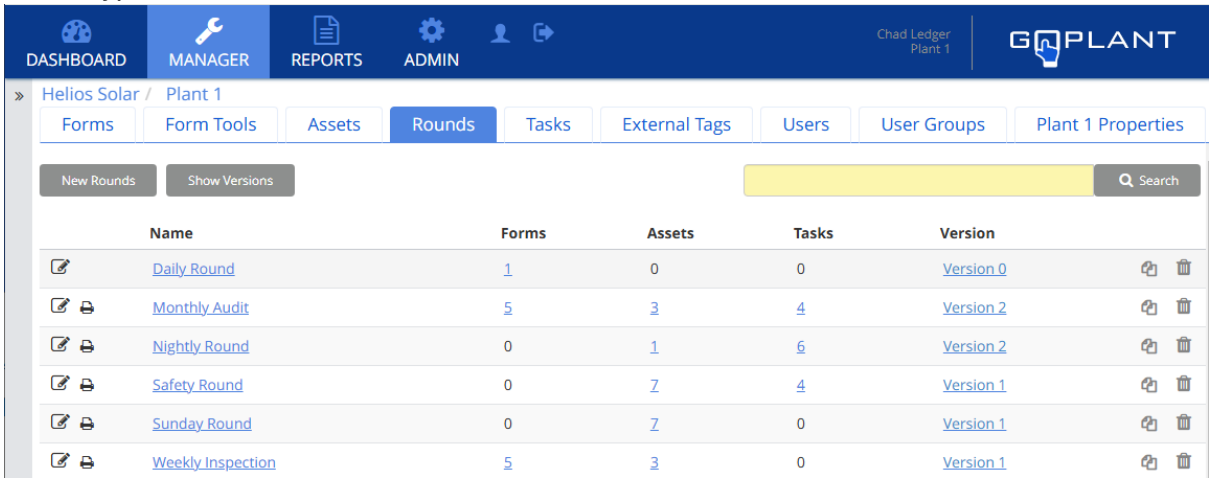

Figure 1: Rounds panel hyperlinks

Clicking on the hyperlink displays the list of resources associated with the selected resource.

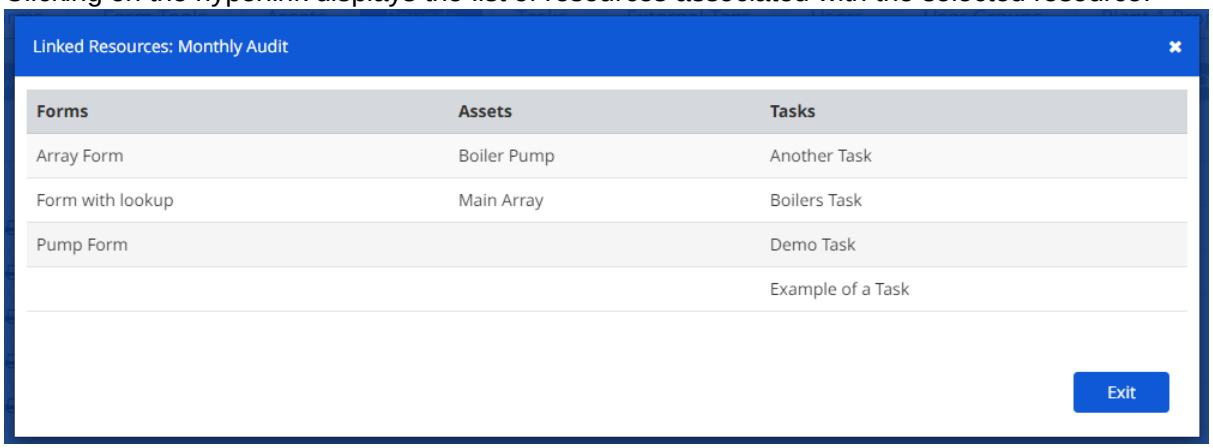

Figure 2: List of linked resources

Moving the cursor over any of the linked resource names will display its storage group path.

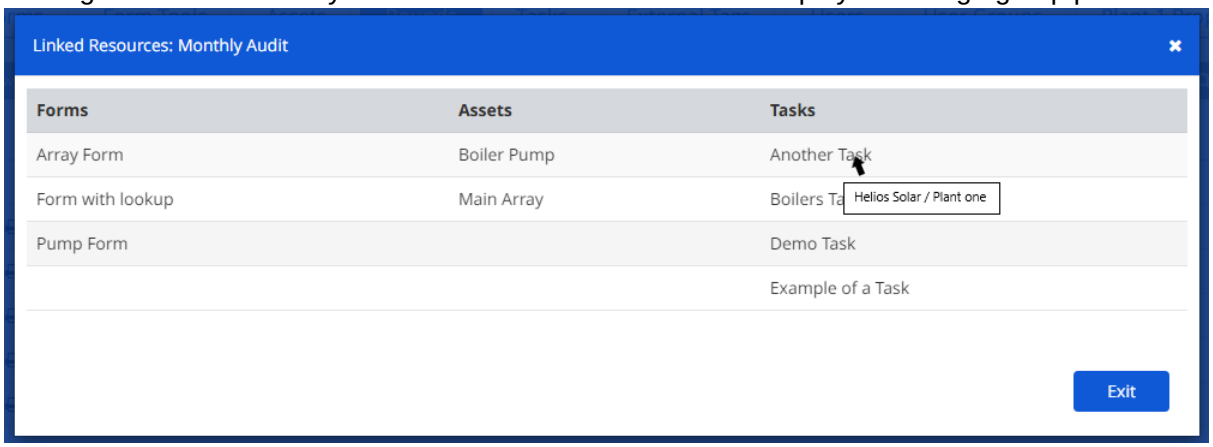

Figure 3: Hover text displays storage group path

2 Standard Report Updates

To further improve GoPlant reporting, several updates have been made to the standard reports packaged with GoPlant. This release includes the first standard reports built directly into GoPlant which do not require a Jasper installation.

The following table lists the new built-in reports, and lists the older Jasper reports they replace.

New Report	Replaced Reports
Alert Status	GoPlant – Alert Status
Asset List	GoPlant – Asset Detail
	GoPlant – Asset Status
	GoPlant – Asset Summary
Asset QR Code Label	GoPlant – Asset QR Code Label Print
Vibration Measurement Point Configuration	GoPlant – Asset Vibration Measurement Point Configuration
Vibration Readings	GoPlant – Asset Vibration Readings

The replaced reports will no longer be available via the GoPlant report panel. Those reports are still available to premise customers using the Jasper direct interface. Future releases of GoPlant will continue to consolidate the older reports into newer ones and include the ability to schedule these reports directly in GoPlant. Once all reports have been migrated and the direct scheduling functionality is available, GoPlant will no longer support the older Jasper reports.

3 GoPlant Enhancements

1. Website: Multiple performance enhancements.
2. Website: Fixed issue where task would sometimes not schedule when republished.
3. Website: Fixed issue where blank form would not print.

4. Reporting: Updated input control for Round Tag Source report to display updated round name.
