9	B-LINE SHUT COMB FAN	B-LINE SHUT COMB FAN	16/05/2025	-	@A	●	Alerta geral 1
10	LP 1.1.2 PMP	LP 1.1.2	14/05/2025	-	@A	●	Alerta geral 1

- 1.2. All date formats were updated according to the language chosen

2. Help and information sections in Compass:

- 2.1. Explanation about each dashboard when clicking on the 'i' icon next to the page title. For example:

Analysis Backlog ⓘ

Compass help
×

Analysis Backlog

Items in the Analysis Backlog are waiting to be reviewed by an Analyst and are prioritized based on the type and count of alarms that have appeared since the last time they were reported. Upon publishing a new status report for an asset, the alarm counts (Analysis Reasons) will be reset and the asset will be considered as handled until new analysis reasons appear.

The Collected column shows the most recent date when a new measurement was recorded for the asset. Note: This is the time of the actual measurement, and not the time that the measurement was uploaded to @O/@A/Compass.

The Reported column displays the most recent date when a status report was published.

Clicking the Show handled filter reveals the full list of assets, including those assets that do not require an Analyst's attention.

Assets are prioritized according to the following:

~~Band alarm > Band alert > DiagX alarm > DiagX alert > Protect alarm > Alarm > Overall alarm > Overall alert > Feedback > Device Fault > No~~
