

GoPlant from SKF

GoPlant release notes
Revision **2026.1**

1 REST API Enhancements

The GoPlant REST API has been updated. Administrators can use the API to retrieve GoPlant user information. Additionally, the responses endpoint has now returns any external tags associated with a response.

Comprehensive documentation of the API is available online on your GoPlant instance. For instance, if your installation is <https://mysite.goplant.mobi>, your REST API documentation is available at <https://mysite.goplant.mobi/api/docs>

Figure 1: API Documentation Landing Page

Additional information on the new REST APIs including examples is available in the *GoPlant Data Integration Overview* document.

The previous version of the REST API is still available in the current release of GoPlant. In a future version of GoPlant, the older API will be deprecated and no longer be supported. It is recommended that users of the old API update to the latest version at their earliest convenience.

2 GoPlant Enhancements

1. Website: Updated the task management and task history widgets to allow tasks to be sorted by name as well as due date.
2. Website: Increased the maximum length of asset tag, asset tag description, and asset barcode value.
3. Website: Resolved an issue where the navigation menu would expand unexpectedly.
4. Website: Performance improvements when logging in.
5. Mobile: Updated the task pane to allow tasks to be sorted by name as well as due date.
6. Mobile: Improved reliability of NFC scans.

7. Mobile: Performance improvements when logging in.
8. Reports: Improved error notification when a scheduled report fails to run.
9. Reports: Updated the Task Completion report to consistently create the same number of columns when exporting to Excel.
